and value-added glass*

# DecorVue patterned glass

PFG's Rolled plant has the capacity to produce 30 000 tons of high quality patterned glass a year.

Patterned glass offer decorative benefits to architects and designers, for a range of exciting applications in homes, offices, restaurants, hotels, conference venues, game lodges and other venues where privacy and light are important.

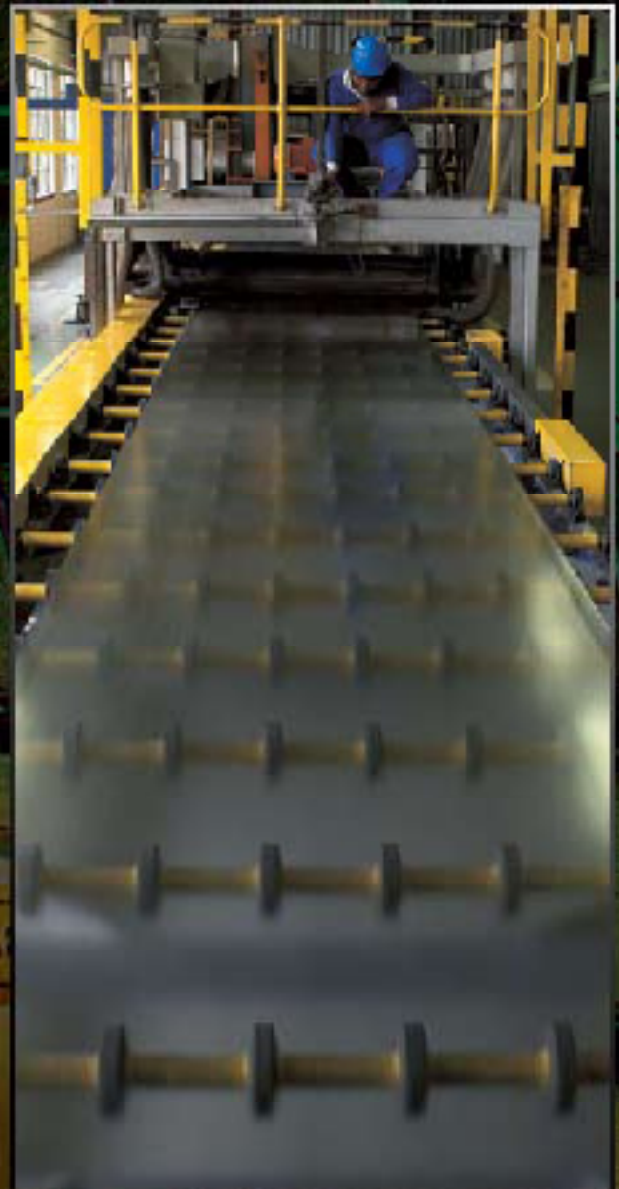

PFG's patterned glass products are grouped under the brand, DecorVue. Each pattern offers a specific obscurity level which compliments, rather than dominates, the environment.

We produce 14 different patterns in thicknesses of between 2mm-10mm, in lengths up to 3 060mm and a ribbon width of up to 1 525mm. Sizes within these parameters can be made to order.

Our patterns are available in clear, and three patterns are available in amber.

DecorVue products are packed and supplied to customers throughout southern Africa and export destinations. Our glass is supplied directly from the factory in Springs (Gauteng) or from our depots in Cape Town and Durban.

PFG is an ISO 9001:2000 certificated company (quality management system) and we hold ISO 14001 certification for our environmental management practices.
